ECE 321 Lab exercise - 8

Fall 2017

Exercise 1:

Create a program in C that builds a balanced binary tree by asking the user to give integer numbers (more than 10 numbers in total). After the tree has been created, write a function that calculates the product of the numbers.

Tip: In order to use the functions as they were implemented in libc, you have to put the following line as the first line of your code:

#define _CRT_SECURE_NO_WARNINGS
